

Easy and secure application access from anywhere

Organizations are required to deliver business applications and data anywhere as trends such as globalization, mobility, offshoring and home-based working continue to move users further away from the datacenter. Additionally, natural disasters, strikes, terrorist attacks and other incidents may cause unacceptable productivity losses that can lead to financial disaster. Traditional remote access solutions fail to address the inherent risk associated with providing anywhere access to all users, and data leaks can cost organizations millions per incident—not including potentially severe legal penalties due to government regulatory requirements.

Citrix Access Gateway is the best secure access solution for the Citrix Delivery Center

- Leader: Gartner Magic Quadrant for SSL VPN
- SmartAccess: Adaptive and highly granular scenario-based controls over access and actions
- World-class scalability and performance

Citrix Access Gateway

Citrix® Access Gateway™ is a secure application access solution that provides IT with granular application-level policy and action controls to secure access to applications and data while allowing users to work from anywhere. It gives IT a single point of control and tools to help ensure compliance with regulations and the highest levels of information security across and outside the enterprise. At the same time, it empowers users with a single point of access—optimized for roles, devices, and networks—to the enterprise applications and data they need. This unique combination of capabilities helps maximize the productivity of today's mobile workforce.

Simplify IT for users

Access Gateway delivers the same rich desktop experience that users enjoy when connected to the local network. Its always-on access automatically and seamlessly reconnects users when they change locations and devices or lose connectivity, reducing frustration and improving productivity. Its Web-based landing page delivers quick and easy access to key resources, and users can choose from a wide variety of devices. Additionally, Access Gateway and Citrix Repeater™ work together synergistically to provide mobile and remote users with a superior access experience. The Repeater Plug-in speeds application response time through the SSL VPN tunnel, thus enabling the powerful combination of secure and accelerated access to data and applications.

Accelerate business with adaptive application-level controls

The robust policy-setting capabilities of Access Gateway provide an access solution that easily adapts to changing business requirements, allowing IT to maintain a single access infrastructure for all user communities while protecting sensitive data. The sophisticated endpoint analysis and authentication capabilities of Access Gateway allow IT to detect client device configurations and user identity to determine trust level. Once trust level is established, adaptive policies apply appropriate controls over the levels of access to applications and resources.

Optimize secure delivery of applications and virtual desktops

Access Gateway provides unmatched capabilities when deployed with Citrix® XenApp™ or Citrix® XenDesktop™, enabling secure connections from XenApp and XenDesktop clients without any additional network tunneling software. Access Gateway delivers the strongest security controls available while extending user access to additional applications and resources (if allowed by administrator-defined IT security policies). SmartAccess provides advanced policy-based control of both XenApp applications and XenDesktop virtual desktops including individual capabilities such as application streaming, printing and saving. Citrix SmoothRoaming™ allows users to move seamlessly between access locations and devices, automatically adapting access to each unique access scenario.
