

# FortiGate®-3000 Series

## Multi-Threat Security Appliances

The FortiGate-3000 series of multi-threat security appliances offers unmatched levels of performance, scalability, and security for large enterprise networks. Built from the ground up by Fortinet, the FortiGate-3000 series combines three essential elements to achieve these benefits: custom hardware including FortiASIC™ processors, a modular architecture for future growth, and multi-threat security from the FortiOS™ operating system.

### High-Performance Hardware

A FortiGate-3000 system can provide up to 55 Gbps of security inspection performance using the modular and scalable expansion inherent to the system. Using optional high-speed modules such as the ADM-XB2, the FortiGate-3000 system delivers maximum performance for your network. Available expansion options include: additional accelerated interface modules, security processing modules, and local disk-based storage modules. The series is also capable of wire-speed firewall performance at 10-GbE, GbE, and 10/100 link speeds.

### Multi-Threat Security

Using the advanced FortiOS operating system, the FortiGate-3000 series appliances effectively neutralize a wide range of security threats facing networks today. Whether the appliances are used as a high-performance firewall or as a comprehensive multi-threat security solution, FortiGate appliances protect assets with some of the most effective security available.

### FortiOS 4.0 Software Redefines Networks Security

FortiOS 4.0 is a purpose-built operating system that leverages the power of specialized FortiASIC hardware to offer increased levels of security and performance. Fortinet developed FortiOS 4.0 software solely for the FortiGate multi-threat security platform. FortiOS software enables a comprehensive suite of security services – firewall, VPN, intrusion prevention, antimalware, antispam, web filtering, application control, data loss prevention, vulnerability management, and end point network access control.

### The FortiASIC Advantage

FortiASIC processors power FortiGate platforms. With exclusive hardware, the purpose built, high-performance network, security, and content processors use intelligent and proprietary digital engines to accelerate resource-intensive security services.

## FortiGate-AMC Modules

Fortinet accelerated interface modules increase the flexibility of FortiGate® and FortiCarrier™ platforms with 10-Gigabit Ethernet and Gigabit (GbE) Ethernet interface Options. They also provide additional security performance for the platforms, adding wire-speed firewall and near wire-speed IPSec VPN security for traffic traversing the module's ports.

### Accelerated Interface Modules

Fortinet accelerated interface modules are available in double-width and single-width Advanced Mezzanine Card (AMC) form factors, providing a range of options to customers with AMC-enabled Fortinet platforms. The AMC standard, also known as AdvancedMC, was developed by the PCI Industrial Computers Manufacturers Group (PICMG), which has over 100 companies building to the specification. The AMC standard has been developed to meet the requirements for the next generation of carrier-grade communications equipment.

### Security Processing

Fortinet security processing modules provide multi-gigabit throughput increases for intrusion prevention, firewall, and IP multicast applications. All models are based on the carrier-class Advanced Mezzanine Card™ (AMC) specification used in enterprise-class FortiGate multi-threat security platforms. Fortinet security processing modules work to increase overall system performance by offloading select security applications and network processing functions from the FortiGate host system while maintaining all the benefits of a unified security platform.

### Storage

Fortinet all-in-one storage modules extend the capabilities of Fortinet platforms. With FortiGate multi-threat security platforms, the modules provide local storage facilities for security and system events. In addition, they can enable the WAN optimization feature available in FortiOS software version 4.0 or later, which works to accelerate applications commonly affected by slower network connections.
