

McAfee Policy Auditor Software

Integration plus innovation equals compliance efficiency

Efficiently automate audit processes with advanced, purpose-built IT auditing software.

Key Advantages

Improve operations

Unify management of policy audits and endpoint security

Reduce time to compliance

Run consolidated audits across both managed (agent-based) and unmanaged (agentless) systems

Prove compliance consistently

Report against key industry mandates and internal policies

Automate manual audits

Up-to-date data, powerful dashboards and reports, and built-in waiver management simplify every step

Enforce compliance

Remediate noncompliant systems with McAfee Remediation Manager software

SCAP-FDCC validated

Validated by the National Institute of Standards and Technology (NIST) as conforming to the SCAP standard

Raise Productivity, Lower Audit Costs

If compliance mandates are intended to improve security, why do audits and endpoint policy management take so much time away from managing IT risk? That's because myriad point processes and products result in ad hoc efforts and error.

McAfee® Policy Auditor software offers an optimized approach. Integration and innovation produce real ROI and significant productivity gain, while making audits painless and less expensive.

Prove Compliance with Key Industry Mandates

By mapping IT controls against predefined policy content, McAfee Policy Auditor software automates manual audit processes and helps you report consistently and accurately against internal and external policies. McAfee Policy Auditor software ships with benchmark templates for a variety of compliance mandates: PCI DSS, SOX, HIPAA, FISMA, and the best-practice frameworks ISO 27001 and COBIT. Templates cover Microsoft Windows, Sun Solaris, Linux Red Hat, HP/UX, and Apple Macintosh (Mac) OS-X platforms.

Cut Management Effort with McAfee ePolicy Orchestrator® Software Integration

Seamless integration with McAfee ePO™ software eases agent deployment, management, and reporting. The single ePO console lowers cost of ownership by consolidating endpoint security management and compliance management. You save money on hardware, training, and operational costs and get unified control over the policies and protection on each host.

Unified Policy Audits Reduce Time to Compliance

Organizations can run consolidated audits across both managed (agent-based) and unmanaged (agentless) systems. From the ePO console, they can define and select a unified policy benchmark once and have the assessment performed across many different asset types. This reduces the effort needed to run audits and, for the first time, provides organizations with a single unified report across all assets.

Use Scripting to Extend McAfee Policy Auditor Software Check Capabilities

Create rules from any scripting language supported by the system being audited to extend the check capabilities of policy agents further. Sample languages include VBScript, batch files, Perl, and Python.

Four McAfee Policy Auditor software tabs in the ePO console make it easy to deploy policies and manage audit processes.

Specifications

Server and console

- Free disk space: 1 GB minimum (first-time installation); 1.5 GB minimum (upgrade); 2 GB recommended
- Memory: 1 GB RAM minimum (2–4 GB recommended)
- CPU: Pentium III-class 1.0 GHz or better (1.5 GHz or better, multiprocessor or dual-core recommended)
- Operating system: Microsoft Windows 2000 SP4/Windows Server 2003 SP1/2 R2 (32-bit) only

McAfee agents

- CPU: Pentium-class, Celeron, or compatible processor
- Memory: 512 MB RAM minimum (1 GB recommended)
- Free disk space: 100 MB
- Operating system: Windows 2000, XP, 2003, Vista; Linux Red Hat; Solaris; Macintosh OS-X; HP/UX

Database software

- Microsoft SQL Server 2005, MSDE 2000, or SQL 2000 Remote console
- New web-based console only requires a web browser
- Web browser: Microsoft Internet Explorer 6.0 SP1 or later

Meet the New Standard in Compliance Validation: SCAP

McAfee Policy Auditor software sets a new standard with its aggressive implementation of the Secure Content Automation Protocol (SCAP) family. This open standard enables interoperability among products and services and helps reduce audit time, expense, and effort. Supported protocols include:

- eXtensible Checklist Configuration Description Format (XCCDF)
- Open Vulnerability and Assessment Language (OVAL)
- Common Vulnerabilities and Exposures (CVE)
- Common Configuration Enumeration (CCE)
- Common Platform Enumeration (CPE)
- Common Vulnerability Scoring System (CVSS)

Import and Adapt Industry Benchmarks in Minutes

Through SCAP support and its own innovative engineering, McAfee helps you validate compliance easily, even when benchmarks and policies change. Download benchmarks from authoritative sites, such as the Federal Desktop Core Configuration (FDCC) benchmark on the NIST website, and view detailed security guidance to benchmarks. Uniform benchmarks limit misinterpretations among security teams and external auditors.

Ensure Up-To-Date Data and Reduce Disruptions

An innovative continuous audit model helps security and audit teams ensure data is current and accurate. It eliminates manual data generation for internal and external audits. To prevent disruption to critical business applications, a blackout window lets IT operations specify times when audits may not be conducted.

Align Business and Audit Processes

Audits are never convenient, but they can now be less disruptive. You can document and grant waivers to justify deviations from policy, and set expiration dates to limit exposure.

- *Exemption*—Excuses a system from all audits
- *Suppression*—An exception that is suppressed from reports

Simplify Trouble Ticketing

When audits detect issues, ePO helps you create and track them easily. Optional integrations let you push tickets to third-party trouble ticketing systems like Remedy.

Enforce Compliance Through McAfee Remediation Manager Software

Go beyond identifying problems. Import McAfee Policy Auditor software results into McAfee Remediation Manager software for automated remediation of noncompliant systems.

Continuous Compliance Through McAfee Change Control Software

Audit and remediate and then prevent unauthorized changes ensuring continuous compliance to policy.

McAfee Solution Services

Along with our McAfee SecurityAlliance™ partners, McAfee offers a wide variety of services to help you assess, plan, deploy, tune, and manage your security and compliance efforts.

Technical Support

McAfee Gold Technical Support is included with your purchase. Make sure everything runs smoothly during and after installation by upgrading support with flexible programs from McAfee Technical Support. For more information about McAfee Policy Auditor software, please visit www.mcafee.com.

Powerful, graphical dashboards help you measure, monitor, and report compliance.
